## SOLUTIONS

## Learning Goal 30

## Multiple Choice

1. c A corporation wants to reissue treasury stock at a higher price than it paid. In this way, a greater amount of capital can be obtained than was returned to the stockholders when the treasury stock was purchased.
2. b
3. a A stock split increases all issued shares. This means both outstanding shares and shares held by the company as treasury stock. (Note: Total authorized shares do not change.)
4. d Issued shares means both outstanding shares and shares held in treasury, so this total will not change because as outstanding shares decrease, treasury shares increase. Legal capital is a fixed amount determined at the time stock is issued. Total stockholders' equity is reduced because cash is paid out to some of the stockholders who decide to sell their shares back to the company.
5. d Choice (b) is an example of selling treasury stock at a price greater than the purchase price.

Choice (a) can happen if treasury stock is sold below cost.
6. b
7. a A stock dividend has no effect on total stockholders' equity and no effect on the par value per share.
8. d
9. d Two effects are occurring. First, 500 shares at a cost of $\$ 20$ per share are being removed from a contra account that reduces stockholders' equity. This is an increase in stockholders' equity of $500 \times \$ 20=\$ 10,000$. Second, the stock is being sold for $\$ 4$ above the purchase price. This is an additional increase in stockholders' equity of $500 \times \$ 4=\$ 2,000$. A faster calculation is $500 \times \$ 24=\$ 12,000$.
10. c
11. d
12. b
13. a
14. d A stock split reduces the par value per share, but the total par value is unchanged because the number of shares increases.
15. b Par value per share: $(\$ .15 \times 2 / 3)=\$ .10$. Total shares: $(90,000 \times 3 / 2)=135,000$.
16. c
17. c A stock split reduces the par value per share. A cash dividend reduces stockholders' equity. A liquidating dividend is a cash dividend that decreases both retained earnings and paid-in capital.
18. d Because this is a small stock dividend (less than 20-25\% of outstanding shares) GAAP requires that market value be used to value the transaction. Therefore, retained earnings decreases by $(100,000 \times .10 \times \$ 20)=\$ 200,000$. Paid-in Capital in Excess of Par will increase by the excess of market value above the par value which is $(\$ 20-\$ 1) \times 10,000=\$ 190,000$. (The Common Stock account also increases by $\$ 10,000$.)
19. b
20. a This is a large stock dividend, so the entire amount is recorded at par value.
21. c
22. c A split has no effect on the total dollar amount of any stockholders' equity accounts.
23. d

## SOLUTIONS

## Discussion Questions and Brief Exercises

1. A corporation would purchase its own stock and hold it as treasury stock for several possible reasons. These reasons include:

- If the stock can be purchased at a lower price and resold at a higher price, the business can increase the amount of invested capital.
- Reducing the shares of outstanding stock tends to keep the stock price higher or reduce the rate of decrease. This makes most investors happy.
- Reducing the outstanding shares makes it more difficult for another company or large investor to obtain enough shares to acquire control of a company.
- The company may need additional shares for other purposes such as employee stock plans or using company stock to acquire another company.
Gain or loss is never recorded with treasury stock sales. When treasury stock is sold above or below its acquisition cost, it is simply an expansion or contraction of stockholders' equity. When a company is buying and reissuing shares of its own stock, it is just dealing with its own capital.

2. Authorized stock is the total amount of shares that a corporation is authorized to issue at the time it receives a charter from the state of incorporation. Issued stock is the total number of shares that have ever been issued to investors and other parties and that have not been cancelled or retired.
Outstanding stock is the number of shares that are currently held that are not treasury stock.
3.     - Effect on total assets: Total assets increase because cash is received.

- Effect on total stockholders' equity: Stockholders' equity increases because the Treasury Stock contra account is reduced. This amount is increased if the stock is sold above its purchase price and decreased if the stock was sold below its purchase price.
- Effect on net income: Net income is not affected by a treasury stock purchase or sale.
- Effect on paid-in capital: Paid-in capital will increase if the treasury stock is sold for more than its cost. Paid-in capital will decrease if treasury stock is sold for less than its cost. (An alternative is to decrease retained earnings if there is not sufficient paid-in capital from treasury stock transactions.)
- Although treasury stock has a debit balance, it is not an asset. It is a contra equity account.

Example of increase: 1,000 shares of treasury stock were purchased for $\$ 20$ and sold for $\$ 23$.
Cash 23,000

| Increase $\rightarrow \quad$Treasury Stock <br> Paid-in Capital in Excess of Par, Treasury Stock | $\left.\begin{array}{r}20,000 \\ 3,000\end{array}\right)$ |
| :--- | :--- |

Example of decrease: 1,000 shares of treasury stock were purchased for $\$ 20$ and sold for $\$ 18$

| Decrease | Cash <br> Paid-in Capital in Excess of Par, Treasury Stock <br> Treasury Stock | 2,000 |
| :--- | :--- | :--- | :--- |

## SOLUTIONS

## Learning Goal 30, continued

4. Par value per share decreases. Total par value is unchanged. Total shares outstanding increases. Total shares issued increases. Total shares authorized is unchanged.
5. A stock dividend removes an amount from retained earnings and transfers that same amount into paid-in capital. Therefore, the total stockholders' equity is unchanged. More shares are outstanding, but the value of the business itself has not changed. A stock split has no effect on total stockholders' equity because the total dollar value of stockholders' equity is unaffected and remains unchanged. The same amount of stockholders' equity is simply being divided among more shares of issued stock.
6. 

| Date | Account | Post. <br> Ref. | Dr. | Cr. |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |
| March | Treasury Stock |  | 70,000 |  |
|  | Cash |  |  | 70,000 |
|  |  |  | 54,000 |  |
| May 3 | Cash |  |  | 42,000 |
|  | Treasury Stock |  |  | 12,000 |
|  | Paid-in Capital in Excess of Par, Treasury Stock |  | 26,000 |  |
| June 28 | Cash |  | 2,000 |  |
|  | Paid-in Capital in Excess of Par, Treasury Stock |  |  | 28,000 |
|  | Treasury Stock |  |  |  |

Analysis:

- On March 1, 5,000 shares $\times \$ 14=\$ 70,000$ cash paid.
- On May $3,3,000$ shares $\times \$ 18=\$ 54,000$ cash received. The cost of the treasury shares was $3,000 \times \$ 14=\$ 42,000$. The additional $\$ 4$ per share $=\$ 12,000$ of additional paid in capital obtained.
- On June 28, 2,000 shares $\times \$ 13=\$ 26,000$ of cash received. The cost of the treasury shares was $2,000 \times \$ 14=\$ 28,000$. The difference of $\$ 1$ less per share is a decrease in paid-in capital of \$2,000.

7. Items that decrease retained earnings:

- Net loss (from the income statement)
- Cash and stock dividends (All dividends are reductions in retained earnings.)
- Prior period adjustment (from an accounting error in a prior period that overstated net income)
- Accumulated prior effect of a change in accounting principle (cumulative decrease in net income)
- Sale of treasury stock at a price below cost (Retained earnings is debited, or reduced, when there is insufficient paid-in capital from treasury stock to absorb the full difference for the decrease in stockholders' equity.)
- Increase in appropriations of retained earnings (when retained earnings available for dividends is reduced by a journal entry)

## SOLUTIONS

## Learning Goal 30, continued

7, continued
Items that increase retained earnings:

- Net income (from the income statement)
- Prior period adjustment (from an accounting error in a prior period that understated net income)
- Accumulated prior effect of a change in accounting principle (cumulative increase in net income)
- Reduction in appropriations of retained earnings (when retained earnings available for dividends is increased by a journal entry that reduces or eliminates the appropriation)

8. A prior period adjustment is an entry to retained earnings (and to some other balance sheet account) to correct a revenue or expense error of a prior period. If the error caused the prior period net income to be overstated, retained earnings will be reduced by the adjustment in the current period. If the error caused the prior period net income to be understated, retained earnings will be increased by the adjustment in the current period. Prior period adjustments are shown as a decrease or increase in retained earnings on the statement of retained earnings (or statement of stockholders' equity, which is discussed in Learning Goal 31). Prior period adjustments also require that the prior financial statements affected by the error be restated.
9. A change in accounting principle is a change from a currently used and generally accepted accounting principle to a different generally accepted accounting principle. The accumulated effect of the change on the net income of all prior accounting periods that are affected is shown as an adjustment to the beginning balance of retained earnings on the statement of retained earnings. This same amount will also require a change in some asset or liability item in the current period. All affected previous financial statements must be restated using the new principle. (Note: If comparative statements of retained earnings are presented, the beginning balance of the statement of the earliest period will show the adjustment.)
10.     - Common Stock: The total dollar amount remains unchanged at $\$ 100,000$. The par value decreases to $\$ .50$ per share.

- Paid-in Capital in Excess of Par, Common: The total dollar amount remains unchanged at \$1,220,000.
- Treasury Stock: The total dollar amount remains unchanged at $20,000 \times \$ 8.60=\$ 172,000$.
- The total authorized shares are unchanged at 500,000 . The issued shares increase to 210,000 , of which 20,000 are in treasury and 190,000 are outstanding. (The cost per share of the treasury stock becomes $\$ 172,000 / 20,000=\$ 8.60$.)

11. 

## Baker Corporation Statement of Retained Earnings For Year Ended June 30, 2017

Balance, July 1,2007 as reported \$720,000
Correction for 2007 understated income $\quad 5,000$

Balance, July 1 as corrected
725,000
Net loss
$(121,000)$
Less: cash dividends
$(40,000)$
Balance, June 30, 2017
$\$ 564,000$

## SOLUTIONS Learning Goal 30, continued

12. A restriction on retained earnings is a limitation on the amount of retained earnings that may be paid out as dividends. This happens for several reasons:

- Banks and other creditors want to ensure that enough cash is kept in a company to pay business debts.
- State laws restrict the amount of cash that can be used to purchase treasury stock. This is often done by requiring that a restricted amount of retained earnings be maintained that is equivalent to some portion of treasury stock. This requirement maintains retained earnings as a positive offset against the treasury stock.
- If the board of directors anticipates large future cash requirements, a portion of the retained earnings may be restricted to ensure that cash will not be used for payment of dividend. Restrictions on retained earnings are reported in the financial statement footnotes.

13. A stock dividend does not require the corporation to use cash; however, a stock dividend usually pleases the investors because they like owning more shares.
14. Small: GAAP defines a small stock dividend as less than $20-25 \%$ of outstanding shares. Generally, most stock dividends are less than $20 \%$ of outstanding shares. A small stock dividend uses the market value of the stock to determine the value of the transaction by multiplying the number of new shares times the market value per share. The retained earnings account is decreased and Common Stock and Paid-in Capital in Excess of Par accounts are increased. (For no-par stock, the Common Stock account is increased.)
Large: a large stock dividend uses par value to value the transaction by multiplying the par value per share times the number of new shares. The retained earnings account is decreased and the Common Stock account is increased. Large stock dividends do not frequently occur; instead, a corporation will declare a stock split.
15. When a board of directors wants to issue a large number of new shares, a stock split is generally used. Unlike a stock dividend, a stock split will not reduce retained earnings, and the balance in retained earnings will have no effect on the decision of how many new shares to issue.
16. Treasury stock is a contra equity account. This means that it acts as an offset against the rest of stockholders' equity and reduces total stockholders' equity. Treasury stock has a debit balance.
17. 

|  | Par Value | $\times$ | Shares Issued | $=$ |
| :--- | :---: | :---: | :---: | :---: |
| Total $\$$ Par Value |  |  |  |  |
| Before split | $\$ 1$ | 120,000 | $\$ 120,000$ |  |
| 2 for 1 split | .50 | 240,000 | 120,000 |  |
| 3 for 1 split | .3333 | 360,000 | $120,000 *$ |  |
| 3 for 2 split | .6667 | 180,000 | $120,000 *$ |  |
| 4 for 3 split | .75 | 160,000 | 120,000 |  |
| 1 for 2 split | 2 | 60,000 | 120,000 |  |

*Rounded

## SOLUTIONS

Learning Goal 30, continued
18. - Shares owned after the stock dividend: $(1,000 \times 1.15)=1,150$ shares

- Percent ownership before the dividend: $(1,000 / 50,000)=.02$; after dividend: $(1,150 / 57,500)=.02$. His percent ownership remains unchanged at $2 \%$ of outstanding shares.
- Stock price should theoretically be approximately: $(\$ 27 \times 1 / 1.15)=\$ 23.48$

19. For a normal (non-liquidating) cash dividend, (a) there must be a sufficient balance of unrestricted and unappropriated retained earnings, (b) there must be sufficient available cash, and (c) state laws on capital maintenance cannot be violated.
20. A deficit in retained earnings is a debit (negative) balance in retained earnings. A deficit occurs when the cumulative amount of net losses exceeds the cumulative amount of net income. (This includes adjustments for prior period errors and the effect of changes in accounting principles.) Note that dividends cannot create a deficit because dividend declarations generally are not permitted if they would create a negative balance in retained earnings.
21. 

| Item | Stock Dividend | Stock Split |

$\frac{(30,000)}{\$ 8,184,300}$

## SOLUTIONS

## Learning Goal 30, continued

LG 30-2.
a. A stock dividend does not affect total stockholders' equity. The amount will remain at $\$ 1,792,000$.
b. Stock dividends are calculated based on the outstanding shares. Therefore Retained Earnings will decrease by $(90,000 \times .10) \times \$ 8=\$ 72,000$. The new balance will be $\$ 913,000$. Stock Dividends Distributable will be a new account with a balance of $(9,000 \times \$ .05)=\$ 450$. The balance will remain until the stock is distributed, at which time it will be reclassified into the Common Stock account. Paid-in Capital in Excess of Par will increase by $(9,000 \times \$ 7.95)=$ $\$ 71,550$. The new balance will be $\$ 943,550$.
c. Total shares issued will increase by 9,000 shares to 109,000 shares. Total shares outstanding will increase by $10 \%$ ( 9,000 shares) to 99,000 shares. The shares in treasury are not affected by a stock dividend.
d. Total shares issued will be $(109,000 \times 2)=218,000$. Total shares outstanding will be $(99,000 \times 2)$ $=198,000$. The difference between shares issued and outstanding $(218,000-198,000=20,000)$ is the new balance of shares in treasury, which also doubled as a result of the split.
e. A stock split does not affect total stockholders' equity. The amount will remain at $\$ 1,792,000$.

|  |  |  |  |  |

## SOLUTIONS

## Learning Goal 30, continued

## LG 30-4, continued

## Calculations:

- May 27: Cost per share of the treasury stock from the April 4 purchase is $\$ 200,000 / 10,000=\$ 20$ per share. The treasury stock was sold for $\$ 24$ per share, so the additional paid-in capital is $\$ 4 \times 7,000=\$ 28,000$.
- July 8: This is a small stock dividend (less than $20 \%$ of outstanding shares: $25,000 / 297,000=.084$ ). Therefore, the market price is used to value the transaction: $25,000 \times \$ 24.80=\$ 620,000$. The Common Stock Distributable account is credited for the par value ( $\$ 1 \times 25,000$ ), and the balance is credited to Paid-in Capital in Excess of Par.
- Sept. 4: The sales price per share of the treasury stock is $\$ 34,000 / 2,000=\$ 17$. Because this is less than the cost per share ( $\$ 20$ ), it results in a decrease in stockholders' equity of $2,000 \times \$ 3=\$ 6,000$. We record this reduction by debiting Paid-in Capital in Excess of Par for the common stock.
- Oct. 1: The common shares issued before the split are 300,000 $+25,000$ (stock dividend) $+50,000$ $($ stock sale $)=375,000$ shares.

## SOLUTIONS

## Learning Goal 30, continued

LG 30-6, continued

## Comments:

Item 4. The treasury stock account increases by the cost of the purchase.
Item 6. A sale of treasury decreases the treasury stock account by the cost of the shares sold which is $2,000 \times \$ 12=\$ 24,000$. If the treasury stock is sold for more than cost, the additional amount is added to paid-in capital from treasury stock transactions. In this case: $\$ 4 \times 2,000=\$ 8,000$.

Item 8. Paying a previously declared cash dividend reduces Cash and Dividends Payable accounts but does not affect any stockholders' equity accounts.
Item 9. A sale of treasury stock decreases the Treasury Stock account by the cost of the shares sold which is $1,000 \times \$ 12=\$ 12,000$. If the treasury stock is sold for less than cost, the difference is subtracted from paid-in capital from treasury stock transactions. In this case: $\$ 2 \times 1,000=$ $\$ 2,000$. If there is not sufficient balance in Paid-In Capital from Treasury Stock Transactions, (here, $\$ 8,000$ ) the balance would be subtracted from retained earnings.

Item 10. A stock split does not affect the total dollar value of any stockholders' equity accounts; however, total shares issued, outstanding, and in treasury increase.

- Issued shares: $(40,000+50,000+12,000) \times 2=204,000$
- Outstanding shares: $(40,000+50,000+12,000-5,000+2,000+1,000) \times 2=200,000$
- Treasury shares: $(5,000-2,000-1,000) \times 2=4,000$

Total stockholders equity . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . $\$ 1,876,000$

## Comments:

- The beginning balance of common shares issued and outstanding is $(\$ 40,000 / \$ 1)=40,000$ shares.

The year-end number of shares issued is $(40,000+50,000+12,000) \times 2=204,000$.

- The par value of the stock is $(\$ 1 \times 1 / 2)=\$ .50$.
- The number of treasury stock shares is $(5,000-2,000-1,000) \times 2=4,000$. The stock split affects the number of shares but does not change the total cost of the shares. However, the cost of the treasury stock per share has now been reduced to $\$ 6$ per share from $\$ 12$ per share.

| Nov. 30 | Inventory |  | 352,000 |  |
|  | Retained Earnings |  |  | 352,000 |
|  |  |  |  |  |

## Calculations:

- Jan. 5: Preferred cash dividend (semi-annual) is $[(100,000 \times \$ 3) / 2]=\$ 150,000$. The remainder of the dividend goes to common stockholders.
- April 20: 40,000 shares $/ 500,000$ shares $=.08$, which is a small stock dividend. Therefore, using market price per share: 40,000 shares $\times \$ 30=\$ 1,200,000$. Allocated to Common Stock: $\$ .06 \times 40,000=\$ 2,400$.
- July 8: Preferred stock dividend (semi-annual) is $[(100,000 \times \$ 3) / 2]=\$ 150,000$. The remainder of the dividend goes to common stockholders.
- Aug. 23: $2,000 \times \$ 23=\$ 46,000$ total cash received. $2,000 \times \$ 30=\$ 60,000$ cost of treasury shares sold. There is no balance in a Paid-in Capital from Treasury Stock account, so the difference reduces retained earnings.
- Sept. 19: A stock split affects all shares issued, both outstanding and in treasury.
- Oct. 21: Before the stock split, the number of shares held in treasury are $(8,000-2,000)=$ 6,000 . After the stock split, the treasury shares increase to $(6,000 \times 3 / 2)=9,000$. The cost of the shares held in treasury is $(\$ 240,000-\$ 60,000)=\$ 180,000$. Therefore, after the split, the cost per share of the treasury stock now becomes $(\$ 180,000 / 9,000)=\$ 20$ per share. The sale of 1,000 shares results in a credit to Treasury Stock of $1,000 \times \$ 20=\$ 20,000$. The cash received from the sale is $1,000 \times \$ 22=\$ 22,000$.

|  | Paid-in Capital from Treasury Stock Transactions |  |  | 30,000 |
| Oct. 15 | Retained Earnings |  | 250,000 |  |
|  | Short-Term Investments |  |  | 250,000 |
| Dec. 2 | Cash |  | 136,000 |  |
|  | Paid-in Capital from Treasury Stock Transactions |  | 30,000 |  |
|  | Retained Earnings |  | 10,000 |  |
|  | Treasury Stock |  |  | 176,000 |
|  |  |  |  |  |

## Calculations:

- Jan. 4: To preferred stockholders: $[(130,000 \times \$ 5) / 2]=\$ 325,000$. To common stockholders: $\$ 500,000-\$ 325,000=\$ 175,000$.
- June 8: $(235,000$ shares $\times .10)=23,500$ new shares. $10 \%$ is a small stock dividend, therefore the market value of $\$ 30$ per share is used. $(23,500 \times \$ 30)=\$ 705,000$.
- July 11: To preferred stockholders: $[(130,000 \times \$ 5) / 2]=\$ 325,000$. To common stockholders: $\$ 375,000-\$ 325,000=\$ 50,000$.
- Sept. 9: Cost of treasury stock is $\$ 22$ per share. ( 5,000 shares $\times \$ 22$ ) $=\$ 110,000$. Therefore, additional paid-in capital from the sale is $(\$ 140,000-\$ 110,000)=\$ 30,000$.
- Dec. 2: Sale below cost reduces stockholders' equity by $[(8,000 \times(\$ 22-\$ 17)]=\$ 40,000$. A sale of treasury stock below cost first reduces any balance in Paid-in Capital from Treasury Stock Transactions, and then reduces Retained Earnings. The Paid-in Capital from Treasury Stock Transactions has a $\$ 30,000$ balance from September 9.

| Aug. 21 | Declared a 5 for 4 stock split. Will replace 400,000 |  |  |  |
|  | issued shares of \$1 par value common stock with |  |  |  |
|  | 500,000 new shares ( $400,000 \times 5 / 4$ ) of $\$ .80$ par |  |  |  |
|  | value stock ( $\$ 1 \times 4 / 5$ ). |  |  |  |
| Nov. 20 | Retained Earnings |  | 120,000 |  |
|  | Commissions Payable |  |  | 120,000 |
| Dec. 12 | Retained Earnings |  | 1,950,000 |  |
|  | Common Stock Distributable |  |  | 39,000 |
|  | Paid-in Capital in Excess of Par, Common |  |  | 1,911,000 |
| 29 | Cash |  | 380,000 |  |
|  | Treasury Stock |  |  | 176,000 |
|  | Paid-in Capital from Treasury Stock Transactions |  |  | 204,000 |
|  |  |  |  |  |

## Calculations:

- Jan. 4: Preferred stock: $(40,000 \times \$ 50 \times .09 \times 2)=\$ 360,000$ dividends in arrears. $(40,000 \times \$ 50 \times .09) / 2=\$ 90,000$ current semi-annual dividend. Total is $(\$ 360,000+$ $\$ 90,000)=\$ 450,000$. Common stock: $(\$ 600,000-\$ 450,000)=\$ 150,000$.
- March 7: Cash received: $(102,000 \times \$ 40-\$ 280,000)=\$ 3,800,000$. Common stock: $102,000 \times$ $\$ 1=\$ 102,000$. Paid-in Capital in Excess of Par: $(\$ 3,800,000-\$ 102,000)=\$ 3,698,000$.
- May 11: Common shares issued: $(8,000 \times 4)=32,000$. Preferred equity converted to common equity is $[(8,000 / 40,000) \times \$ 2,000,000]=\$ 400,000$ preferred par value $+[(8,000 / 40,000) \times$ $\$ 100,000]=\$ 20,000$ preferred paid-in capital in excess of par.
- June 5: The value of stock that is actively traded on an exchange is a better measure of value than a dealer's asking price. Therefore, the value of the equipment is recorded as $(16,000 \times \$ 34)=\$ 544,000$.

## SOLUTIONS

## Learning Goal 30, continued

LG 30-11, continued

- July 8: Preferred dividends: $(32,000 \times \$ 50 \times .09) / 2=\$ 72,000$. Common dividends: $(\$ 600,000-\$ 72,000)=\$ 528,000$.
- Dec. 12: Because this is a small stock dividend (less than 20-25\% of outstanding common shares), the market price of the stock is used to value the transaction. 500,000 shares have been issued, of which 487,500 are outstanding and 12,500 are held in treasury (stock split increased all shares including the treasury shares). The stock dividend is based on outstanding shares. Therefore: $(487,500 \times \$ 40 \times .10)=\$ 1,950,000 .(487,500 \times .10)=48,750$ number of new shares to be issued. This is recorded as Common Stock Distributable of $(48,750 \times \$ .80$ par value per share) $=\$ 39,000$.
- Dec. 29: The number of treasury stock shares: 10,000 beginning balance, increased to 12,500 from the stock split $(10,000 \times 5 / 4)$ on August 21 . The total cost of the treasury stock is $\$ 220,000$. Therefore, the average cost per share is $\$ 220,000 / 12,500=\$ 17.60$ per share. $(10,000$ shares $\times \$ 17.60)=\$ 176,000$ cost of treasury stock sold.
b. Account Balances as of December 31, 2017:
