## SOLUTIONS

## Multiple Choice

1. a
2. b
3. a
4. a Debit Income Summary and credit Inventory for the beginning inventory balance and credit Income Summary and debit inventory for the ending inventory balance.
5. b Ending inventory is an inter-column entry between the income statement and balance sheet columns.
6. d On a single-step income statement both cost of goods sold and interest expense are singleline items as part of total expenses-there is only one expense section for all expenses.
7. a This account has a debit balance, so it is credited and increases the total debit to Income Summary.
8. c
9. d See the example in the income statement column of the worksheet in this learning goal.
10. a This kind of question is a good situation to apply the formula $\mathrm{BI}+$ net $\mathrm{P}-\mathrm{EI}=\mathrm{C}$ of GS. Simply put some numbers into the formula so that beginning inventory is $\$ 3,000$ less than ending inventory. You can also understand this intuitively without numbers by observing that cost of goods sold is equivalent to current purchases less the amount of purchases that were added to inventory. If ending inventory is greater than beginning inventory, then not all the current purchases were sold.
11. d This kind of question is a good situation to apply the formula $\mathrm{BI}+$ net $\mathrm{P}-\mathrm{EI}=\mathrm{C}$ of GS . Simply put some numbers into the formula so that ending inventory is $\$ 5,000$ less than beginning inventory. You can also understand this intuitively without numbers by observing that cost of goods sold is equal to current purchases plus the amount of goods that had to be taken out of inventory to sell. If ending inventory is less than beginning inventory, then the current purchases were not sufficient and must have been less than cost of goods sold by the amount that had to be taken out of inventory.
12. d
13. a $(\$ 539,600-\$ 297,475) / \$ 539,600=.4487$
14. $\$ 51,000$. Net sales of $\$ 305,000$ minus cost of goods sold of $\$ 200,000=\$ 105,000$ gross profit. $\$ 105,000-(\$ 24,000+\$ 30,000)$ operating expenses $=\$ 51,000$ operating income. Interest expense is not part of operating income.

## Discussion Questions and Brief Exercises

1. Net Sales $=$ Sales - Sales Discounts - Sales Returns and Allowances.
2. 

| Cost of goods sold |  |  |  |
| :---: | :---: | :---: | :---: |
| Beginning inventory |  |  | \$ 4,500 |
| Purchases. |  | \$ 27,000 |  |
| Less: Purchase returns and allowances | \$ 500 |  |  |
| Purchase discounts | 1,800 | 2,300 |  |
| Net purchases |  | 24,700 |  |
| Add: Freight-in. |  | 1,200 |  |
| Cost of goods purchased. |  |  | 25,900 |
| Cost of goods available for sale |  |  | 30,400 |
| Ending inventory |  |  | 6,100 |
| Cost of goods sold |  |  | 24,300 |

## SOLUTIONS

## Learning Goal 12, continued

3. a) Gross Profit $=$ Sales - Cost of Goods Sold. Gross profit represents how much dollar revenue remains after covering the cost of merchandise sold. Gross profit must be enough to cover remaining expenses and provide a net income.
b) Operating Income $=$ Gross Profit - Operating Expenses. This is the recurring income that results from the business operations.
c) Net Income $=$ Operating Income $+/-$ Other Revenue/Gains and Other Expenses/Losses. This is the final amount of income for the period that includes all items.
4. If the company is in the business of selling supplies, then this would be sales revenue. Otherwise, the transaction is incidental to being in business and would be reported as "other" on the income statement.
5. a) The inventory change would be reported in the adjustments column of the worksheet as follows: 1) Debit income summary $\$ 15,000$ and credit inventory $\$ 15,000$. 2) Debit inventory $\$ 12,000$ and credit income summary $\$ 12,000$.
b) Enter beginning inventory balance of $\$ 15,000$ as a debit in the income statement column. Then credit \$12,000 ending inventory in the income statement column and debit \$12,000 in the balance sheet column.
In both cases the procedure removes the old (beginning inventory) balance and treats the entire amount as an expense, while recording the ending inventory as an asset that reduces expenses. If beginning inventory is greater, there will be an increase in cost of goods sold expense and a decrease in net income. If ending inventory is greater, there will be a decrease in cost of goods sold expense an increase in net income.
6. The gross profit percentage is calculated as gross profit dividend by net sales. In this example, the gross profit percentage is: $\$ 162,000 / \$ 450,000=.36$, or $36 \%$. The first important use of this calculation is to show management what percentage of each sales dollar remains after covering the cost of the merchandise that was sold. In effect, this is a measure of profitability before considering operating expenses. Because the dollar amounts are usually large, a small percentage change in the gross profit percentage can have a large dollar impact on net income. The second important use of this classification is to compare profitability of different companies. Because the amount being calculated is a percentage, the profitability before operating expenses of companies of all sizes and types can be compared.
7. A multiple step income statement reveals more detail about net sales and the various types of expense categories, such as cost of goods sold, operating expenses, and other expenses. Several addition and subtraction steps are necessary to arrive at net income. A single-step income statement groups all items into two categories. It shows all items that increase net income in one group and all items that decrease net income in a second group; therefore, net income is calculated in single step by subtracting one total from the other.
8. Use the formula BI + net P $-\mathrm{EI}=\mathrm{C}$ of GS. $\$ 175,000+\mathrm{X}-\$ 186,000=\$ 950,000, \mathrm{X}=\$ 961,000$
9. 

| Debit | Credit |
| :--- | :--- |
| Sales | Purchases |
| Purchase Discounts | Beginning Inventory |
| Ending Inventory | Freight-in |
| Purchase Returns/Allow. | Sales Discounts |

10. This is a very important and difficult decision. Gross profit is affected by both sales price and the cost of the goods sold. Gross profit could be increased in the following ways: increase sales price, decrease cost of goods sold, increase sales price and increase cost of goods sold less, and decrease sales price but decrease cost of goods sold more.
Increasing gross profit percentage is generally a good idea if an increase in sales price or a decrease in product quality does not result in a loss of customers and a decrease in total gross profit despite the increase in gross profit percentage.

## SOLUTIONS Learning Goal 12, continued

An increase in the gross profit percentage would be unfavorable if the increase in the gross profit percentage drives customers away and reduces the sales volume to the point where a decrease in total gross profit dollars is the result.

## Reinforcement Problems

Adjusting system closing entry:
The income statement is the same as the income statement answer for the closing system. The method used has no effect whatsoever on the financial statements.

Closing entry:

| Dec. |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 31 | Sales |  | 510,500 |  |
|  | Purchase Discounts |  | 800 |  |
|  | Purchase Returns and Allowances |  | 900 |  |
|  | Income Summary |  |  | 512,200 |
| 31 | Income Summary |  | 468,590 |  |
|  | Sales Returns and Allowances |  |  | 2,500 |
|  | Sales Discounts |  |  | 3,250 |
|  | Merchandise Purchases |  |  | 345,000 |
|  | Freight-in |  |  | 1,100 |
|  | Insurance Expense |  |  | 3,590 |
|  | Admin. Salaries Wages |  |  | 85,500 |
|  | Rent Expense |  |  | 24,000 |
|  | Utilities Expense |  |  | 2,450 |
|  | Supplies Expense |  |  | 700 |
|  | Depreciation Expense |  |  | 500 |
|  |  |  |  |  |
| 31 | Income Summary |  | 33,010 |  |
|  | Retained Earnings |  |  | 33,010 |
|  |  |  |  |  |
| 31 | Retained Earnings | Don't forget that Income Summary was also debited \$22,100 and credited $\$ 11,500$ in the adjusting entries. This makes the balance in Income Summary \$33,010. | 25,000 |  |
|  | Dividends |  |  | 25,000 |

## SOLUTIONS

## LG 12-3, continued

c. Description of the purpose and the effect of the adjusting entries:
(a) The purpose is to record revenue that has been earned but not yet received (accrued revenue). The effect is to increase Accounts Receivable and increase Sales Revenue.
(b) The purpose is to record depreciation expense for the period for the store equipment and the office equipment. The effect is to increase Depreciation Expense and to increase the Accumulated Depreciation for the store equipment and the office equipment. This reduces the book value of each asset.
(c) The purpose is to record interest expense that has been incurred but not yet paid (accrued expense). The effect is to increase Interest Expense and to increase Interest Payable.
(d) The purpose is to record wages expense that has been incurred but not yet paid (accrued expense). The effect is to increase Wages Expense and to increase Wages Payable.

Comment: Notice that the Merchandise Inventory is not part of the closing entry when using the adjusting procedure. The Merchandise Inventory is included in the adjusting entries. This results in a credit to Income Summary of $\$ 19,650$ for the ending inventory and a debit to Income Summary of $\$ 34,020$ for the beginning inventory. Combining this net debit balance in Income Summary of $\$ 14,370$ with the $\$ 54,880$ credit balance in Income Summary from the closing entry results in net income of \$40,510.
d. The current assets substantially exceed the current liabilities. However, the following payables will require a cash payment in July: Wages Payable \$3,200, Accounts Payable \$34,200, and Interest Payable $\$ 1,450$. This is a definite July cash requirement of $\$ 38,850$. (Some part of the current portion of long-term debt may also need to be paid July, but that is not disclosed on the balance sheet.)

What liquid resources are available to meet the $\$ 38,850$ cash requirement? Accounts Receivable will provide some amount close to $\$ 29,000$ if most of the existing receivables are collected in July. (New receivables will be created from July sales.) The rest of the cash (about $\$ 10,000)$ will come from the Cash or Short-Term Investments accounts. Therefore, it is likely that there may be a decrease of about $\$ 10,000$ in the liquid assets during July. What could change this? Borrowing money or substantial cash inflow from July operations would add liquid assets. Estimating the "liquidity" situation is always important.

## LG 12-5.

a. On this type of worksheet (closing system), cost of goods sold is not one single account, but rather consists of several accounts that together make up the cost of goods sold calculation. The account balances are located in the income statement column:

```
Merchandise Inventory (beginning) .......... $ 8,100
Merchandise Inventory (ending) . . . . . . . . . . . . 16,350
Purchases ...................................... . . 161,000
Purchase Returns and Allowances ........... . 5, 500
Purchase Discounts. . . . . . . . . . . . . . . . . . . . . 2,750 (credit balance)
Freight-in...................................... 800 (debit balance)
```

## SOLUTIONS

## LG 12-5, continued

b. Notice that because all the items appear on the income statement, stockholders' equity is always affected. Cash or accounts receivable is the asset usually affected.

| Item | A | $=$ | L | + | SE |
| :--- | :---: | :---: | :---: | :---: | :---: |
| 1) Sales discounts | $\downarrow$ |  |  |  | $\downarrow$ |
| 2) Sales returns and allowances | $\downarrow$ |  |  |  | $\downarrow$ |
| 3) Freight-in | $\downarrow$ |  |  |  | $\downarrow$ |
| 4) Freight-out | $\downarrow$ |  |  |  | $\downarrow$ |
| 5) Purchases | $\downarrow$ |  |  |  | $\downarrow$ |
| 6) Purchase discounts | $\uparrow$ |  |  |  | $\uparrow$ |
| 7) Purchase returns and allowances |  |  | $\downarrow$ |  | $\uparrow$ |

1) Less cash is received. 2) Accounts receivable is reduced. 3) Cash is paid for the freight-bill (to pay the accounts payable to the shipper). 4) Cash is paid for the freight bill (to pay the accounts payable to the shipper). 5) Cash is paid for merchandise (to pay the accounts payable to the seller. Purchases increases cost of goods sold). 6) The merchandise is cheaper so cost of goods sold will be less. 7) Accounts payable decreases and purchase returns/allowances reduces cost of goods sold.

LG 12-6.
a.
(a) The purpose is to record the using up of $\$ 2,500$ of Prepaid Rent. The effect is to reduce the asset Prepaid Rent and increase Rent Expense.
(b) The purpose is to record $\$ 1,500$ of sales that have been earned but not yet received (accrued revenue). The effect is to increase Accounts Receivable and increase Sales.
(c) The purpose is to record $\$ 6,400$ of unearned revenue that has been earned during the period. The effect is to decrease Unearned Revenue and increase Sales.
(d) The purpose is to record that $\$ 350$ of office supplies have been consumed during the period. The effect is to decrease Office supplies and increase Supplies Expense.
(e) The purpose is to record $\$ 550$ of Freight-in Expense that has been incurred but not yet paid (accrued expense). The effect is to increase Freight-in Expense and increase Accounts Payable.
