## SOLUTIONS

## Multiple Choice

1. b
2. a
3. c
4. b However, the double-declining-balance method calculates the depreciation expense on the full asset cost until the final year of use.
5. d Total appraised value is $\$ 800,000$. Equipment is $10 \%$, building is $81.25 \%$, and truck is $8.75 \%$.

These percentages are then multiplied by the cost of $\$ 600,000$.
6. a $\$ 82,000+\$ 5,330+\$ 900+\$ 2,700+\$ 2,000=\$ 92,930$
7. a
8. d
9. a $\$ 5,000,000 / 100,000$ tons $=\$ 50$ per ton cost.
10. c Unearned revenue is a liability.
11. b Note: Intangible assets are amortized, not depreciated.
12. c
13. d
14. a

## Discussion Questions and Brief Exercises

1. For long-term asset acquisitions, all expenditures normally required to acquire an asset and put it into initial normal operating condition are capitalized and become part of the cost of the asset.
2. A business does not have to do anything. It just keeps using the asset! What this means in terms of the matching principle is that the asset was depreciated too quickly. The estimate of the useful life was too low, so too much depreciation expense was charged each year of the asset's estimated useful life. The matching should have been spread over a longer period.
3. (1) Retire (discard) an asset. (2) Sell an asset. (3) Exchange an asset. Gain or loss is always calculated as the difference between the value of what is received and the value (on the books) of what is given up. In exchange transactions that do not have commercial substance, gain is not recorded.
4. A normal repair maintains an asset in its normal operating condition. An extraordinary repair materially improves the function or extends the life of a plant asset. An expenditure for a normal repair is recorded as an operating expense in the period the repair is made. An expenditure for an extraordinary repair is debited to the accumulated depreciation account for the related asset, thereby increasing its book value

## SOLUTIONS

5. At the time of the expenditure, the accumulated depreciation was $(\$ 50,000 / 8) \times 4=\$ 25,000$, The expenditure reduces the accumulated depreciation to $\$ 10,000$ and increases the total useful life to 12 years. Therefore, the new depreciation expense is $\$ 10,000 /(12-4)=\$ 1,250$ per year.

|  | Accumulated Depreciation-Computer |  | 15,000 |  |
|  | Cash |  |  | 15,000 |
|  |  |  |  | 1,250 |
|  | Depreciation Expense-Computer |  |  | 1,250 |

6. Depreciation is the allocation of the cost of a plant and equipment asset to expense over the estimated usefullife of the asset. Depreciation is an application of the matching principle.
7. Straight-line depreciation allocates an equal amount of asset cost to depreciation expense each time period of an asset's usefullife. Double-declining balance is an accelerated method that allocates more cost into expense each time period early in an asset's life and less expense later in an asset's life. Units of production depreciation allocates cost into expense only as an asset is used, so obsolescence and the passing of time is not a significant issue.

As a manager I might be less interested in the best theoretical matching and more interested in the effects on the financial statements. Straight-line will have the same effect on net income each year. Double-declining depreciation will result in less net income in early years and more net income in later years because the depreciation expense is more in the early years. However, this method will result in greater tax savings (more deductible expense) in early years and less in later years. If obsolescence were not a factor and the asset would not be used at the same rate each period, units of production would be a good choice. However, the effect on the financial statements would depend on how much the asset was used.
8.

|  | Account/Explanation | Post. <br> Ref. | Dr. | Cr. |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |
|  | Accumulated Depreciation-Machinery |  | 60,000 |  |
|  | Loss on Retirement |  | 40,000 |  |
|  | Machinery |  |  | 100,000 |
|  |  |  |  |  |

Accumulated depreciation: $(\$ 100,000-\$ 10,000) / 6=\$ 15,000$ per year. $4 \times \$ 15,000=\$ 60,000$.
9.

| Method | Year 1 | Year 2 | Total |
| :--- | :--- | :--- | :---: |
| Straight-line | $(80,000-5,000) / 10=7,500$ | $(80,000-5,000) / 10=7,500$ | 15,000 |
| Double-declining | $80,000 \times .2=16,000$ | $(80,000-16,000) \times .2=12,800$ | 28,800 |

## SOLUTIONS

10. (1) Calculate the total estimated cash flows from the asset. (2) If the value of the total cash flows is less than the asset's book value, the asset is impaired. (3) The value of the asset written off is the difference between its fair market value and book value. The journal entry debits an Impairment Loss account and credits the asset.

- Total estimated cash flows: \$225,000
- Current book value: $\$ 550,000$. Future cash flows are less than book value. The asset is impaired.
- Impairment loss: $\$ 550,000$ book value - \$400,000 fair value = \$150,000 impairment loss.

11.

|  |  |  |  | $2,000,000$ |
|  | Amortization Expense |  |  |  |
|  | Patent |  | 250,000 |  |

Use the shorter of legal life or estimated useful life for the amortization calculation.
12. No, this is not correct; however, it is a common misunderstanding. Accumulated depreciation (sometimes misleadingly called reserve for depreciation) is the cumulative amount of depreciation expense that has been recorded for a plant asset. Any cash reserve would appear as part of cash in the current asset section of the balance sheet.
13. Depreciation is the allocation of the cost of a plant and equipment asset into expense over its estimated useful life. Depletion is the allocation of the cost of a natural resource into expense as the resource is extracted and sold. Amortization is the allocation of the cost of an intangible asset into expense over the shorter of its legal life or estimated useful life.

## SOLUTIONS

## Reinforcement Problems

LG 19-1.
a. $(\$ 47,500+\$ 2,900+\$ 50+\$ 740+\$ 300+\$ 1,265+\$ 2,375=\$ 55,130$ equipment cost) Fire insurance is not capitalized because the insurance will cover the period after installation.
b. $(\$ 752,000+\$ 3,200+\$ 41,500+\$ 5,100+\$ 22,500+\$ 8,000=\$ 832,300$ building cost)

Furniture is a separate asset with a different useful life. Loan interest is an expense unless the building is being constructed, but this is a purchase. Security is an ongoing expense, not directly related to the purchase in this case.
c. Cost can be calculated as book value plus accumulated depreciation: $\$ 92,300+\$ 183,600=$ \$275,900.
d.

| Land | Land Improvements | Building | Current Expenses |
| ---: | :---: | :---: | :--- |
| $\$ 12,500$ | $\$ 18,000$ | $\$ 810,200$ | Current property tax $\$ 18,000$ |
| 195,000 | 14,500 | 20,000 | Fire damage loss $\$ 25,000$ |
| 5,850 | 15,000 | 40,500 | Note: Uninsured losses are |
| 2,950 | 16,750 | $\underline{1,500}$ | not "normal" and are never |
| $\underline{\$ 216,300}$ | $\underline{15,000}$ | $\underline{\$ 872,200}$ | capitalized. |

e. Both cash and debt are part of the cost of property. $\$ 127,500+\$ 38,000=\$ 165,500$.
f. Based on the appraised values, land is $35 \%$, building is $45 \%$, and equipment is $20 \%$. Therefore, land cost is $.35 \times \$ 1,500,000=\$ 525,000$; building cost is $.45 \times \$ 1,500,000=\$ 675,000$; equipment cost is $.2 \times \$ 1,500,000=\$ 300,000$.

LG 19-2. The original depreciation expense is $(\$ 275,000-\$ 5,000) / 8$ years $=\$ 33,750$ per year. At the end of the second year when the useful life is revised, the remaining life is now $6-2=4$ years. The asset's book value is $\$ 275,000-\$ 67,500=\$ 207,500$. This book value (less residual) is then depreciated over the new remaining usefullife: $(\$ 207,500-\$ 5,000) / 4$ years $=\$ 50,625$ per year. (Year 3 and remaining years.)

| Depreciation Expense |  | 50,625 |  |
| :---: | :--- | :--- | :--- |
| Accumulated Depreciation-Computer |  |  | 50,625 |

## SOLUTIONS

## LG 19-3.

Straight-line depreciation:

| Period | Depreciation <br> Expense | Accumulated <br> Depreciation | Book <br> Value |
| :---: | :---: | :---: | :---: |
| 2017 | $\$ 4,000$ | $\$ 4,000$ | $\$ 17,000$ |
| 2018 | 4,000 | 8,000 | 13,000 |
| 2019 | 4,000 | 12,000 | 9,000 |
| 2020 | 4,000 | 16,000 | 5,000 |
| 2021 | 4,000 | 20,000 | 1,000 |

Double-declining-balance depreciation:

| Period | Depreciation <br> Expense | Accumulated <br> Depreciation | Book <br> Value |
| :---: | :---: | :---: | :---: |
| 2017 | $\$ 8,400$ | $\$ 8,400$ | $\$ 12,600$ |
| 2018 | 5,040 | 13,440 | 7,560 |
| 2019 | 3,024 | 16,464 | 4,536 |
| 2020 | 1,814 | 18,278 | 2,722 |
| 2021 | 1,722 | 20,000 | 1,000 |

Comment: $\$ 1,722$ depreciation expense in the last year is calculated: $\$ 2,722-\$ 1,000$.
Units-of-production depreciation:

| Period | Depreciation <br> Expense | Accumulated <br> Depreciation | Book <br> Value |
| :---: | :---: | :---: | :---: |
| 2017 | $\$ 4,000$ | $\$ 4,000$ | $\$ 17,000$ |
| 2018 | 7,000 | 11,000 | 10,000 |
| 2019 | 5,000 | 16,000 | 5,000 |
| 2020 | 3,000 | 19,000 | 2,000 |
| 2021 | 1,000 | 20,000 | 1,000 |

Comment: The depreciation expense per unit is $\$ 20,000 / 10,000$ hours = $\$ 2$ per hour.

## LG 19-4.

a.

|  | Depreciation <br> Expense | Accumulated <br> Depreciation | Book Value |
| :---: | :---: | :---: | :---: |
| 2015 | $\$ 12,000$ | $\$ 12,000$ | $\$ 124,000$ |
| 2016 | 24,000 | 36,000 | 112,000 |
| 2017 | 24,000 | 60,000 | 88,000 |
| 2018 | 24,000 | 84,000 | 64,000 |
| 2019 | 24,000 | 108,000 | 40,000 |
| 2020 | 12,000 | 120,000 | 16,000 |
|  |  |  | 4,000 |

b.

| Loss on Sale |  | 2,000 |  |

c.

|  | Depreciation <br> Expense | Accumulated <br> Depreciation | Book Value |
| :---: | :---: | :---: | :---: |
|  |  |  | $\$ 124,000$ |
| 2015 | 24,800 | 24,800 | 99,200 |
| 2016 | 39,680 | 64,480 | 59,520 |
| 2017 | 23,808 | 88,288 | 35,712 |
| 2018 | 14,285 | 102,573 | 21,427 |
| 2019 | 8,571 | 111,144 | 12,856 |
| 2020 | 8,856 | 120,000 | 4,000 |

| Cash |  | 62,000 |  |
| :--- | :--- | ---: | ---: |
| Accumulated Depreciation-Truck |  | 88,288 |  |
| Truck |  |  | 124,000 |
| Gain on Sale |  |  | 26,288 |

The accelerated depreciation method results in significantly greater depreciation expense the first two years of the asset's life and less in the last three years. For a sale in December 2017, the accelerated method resulted in a gain instead of loss as with straight-line. This is because the book value was lower with the accelerated method.

Calculation notes: (1) Because the asset was purchased on July 1, the first and last years' of the asset's useful life will have only a half-year of depreciation with straight-line. (2) With doubledeclining, the first year is a half year of expense and the final year of depreciation expense is $12,856-4,000=8,856$.

## SOLUTIONS

LG 19-5.
The annual depreciation expense is $\$ 15,000$, and the accumulated depreciation through the end of year 6 is $\$ 15,000 \times 6=\$ 90,000$. The table below shows the details.

| Year | Depreciation <br> Expense | Accumulated <br> Depreciation | Book Value |
| :---: | :---: | :---: | :---: |
| 1 | $\$ 15,000$ |  | $\$ 130,000$ |
| 2 | $\$ 15,000$ | $\$ 15,000$ | $\$ 115,000$ |
| 3 | $\$ 15,000$ | $\$ 30,000$ | $\$ 100,000$ |
| 4 | $\$ 15,000$ | $\$ 45,000$ | $\$ 85,000$ |
| 5 | $\$ 15,000$ | $\$ 60,000$ | $\$ 70,000$ |
| 6 | $\$ 15,000$ | $\$ 75,000$ | $\$ 55,000$ |
| Extraordinary | Repair | $\$ 90,000$ | $\$ 40,000$ |
| 7 | (a) $\$ \mathbf{8 , 4 0 0}$ | $\$ 78,000$ | $\$ 52,000$ |

End of year 6: Book value before repair: $\$ 40,000$
Add repair cost: $\quad 12,000$
New book value: $\quad \$ 52,000$
Year 7 depreciation expense: $(\$ 52,000-\$ 10,000) / 5$ years $=\$ 8,400$ per year
End of year 7 book value: $\$ 130,000-\$ 86,400=\$ 43,600$

| 2019 | $(35,000-1,000) / 5=6,800$ | 11,900 | 23,100 |

Double-declining-balance depreciation:

| Year | Depreciation Expense | Accumulated <br> Depreciation | Book <br> Value |
| :---: | :---: | :---: | :---: |
| 2017 | $(35,000 \times .4) \times \frac{9}{12}=10,500$ | $\$ 35,000$ |  |
| 2018 | $24,500 \times .4=9,800$ | 20,300 | 14,700 |
| 2019 | $14,700 \times .4=5,880$ | 26,180 | 8,820 |

b. Straight-line depreciation:

| Year | Depreciation Expense | Accumulated <br> Depreciation | Book <br> Value |
| :---: | :---: | :---: | :---: |
| 2016 | $[(27,000-0) / 10] \times \frac{4}{12}=900$ |  | $\$ 27,000$ |
| 2017 | $(27,000-0) / 10=2,700$ | $\$ 900$ | 26,100 |
| 2018 | $[(27,000-0) / 10] \times \frac{1}{12}=225$ | 3,600 | 23,400 |

Double-declining-balance depreciation:

| Year | Depreciation Expense | Accumulated <br> Depreciation | Book <br> Value |
| :---: | :--- | :---: | :---: |
| 2016 | $(27,000 \times .2) \times \frac{4}{12}=1,800$ | $\$ 27,000$ |  |
| 2017 | $(25,200 \times .2)=5,040$ | 6,840 | 25,200 |
| 2018 | $(20,160 \times .2) \times \frac{1}{12}=336$ | 7,176 | 19,824 |

## SOLUTIONS

LG 19-6, continued
c. Straight-line depreciation:

| Year | Depreciation Expense | Accumulated <br> Depreciation | Book <br> Value |
| :---: | :---: | :---: | :---: |
| 2017 | $[(150,000-10,000) / 8] \times \frac{6}{12}=8,750$ | $\$ 8,750$ | 141,250 |
| 2018 | $(150,000-10,000) / 8=17,500$ | 26,250 | 123,750 |
| 2019 | $(150,000-10,000) / 8=17,500$ | 43,750 | 106,250 |

Double-declining-balance depreciation:

| Year | Depreciation Expense | Accumulated <br> Depreciation | Book <br> Value |
| :---: | :--- | :---: | :---: |
| 2017 | $(150,000 \times .25) \times \frac{6}{12}=18,750$ |  | $\$ 150,000$ |
| 2018 | $(131,250 \times .25)=32,813$ | $\$ 18,750$ | 131,250 |
| 2019 | $(98,437 \times .25)=24,609$ | 51,563 | 98,437 |

Comment: Notice that in c in the double-declining depreciation, it was perfectly acceptable to round amounts to the next dollar. This is because depreciation calculations are based on estimates and do not involve any transactions with outside parties.

LG 19-7.
a.

| Straight-Line Depreciation |  |  |  |
| :---: | :---: | :---: | :---: |
| Year | Depreciation Expense | Accumulated Depreciation | Book Value |
| Asset Cost |  |  | \$196,000 |
| 2017 | \$38,000 | \$ 38,000 | 158,000 |
| 2018 | 38,000 | 76,000 | 120,000 |
| 2019 | 38,000 | 114,000 | 82,000 |
| 2020 | 38,000 | 152,000 | 44,000 |
| 2021 | 38,000 | 190,000 | 6,000 |
| Double-Declining-Balance Depreciation |  |  |  |
| Asset Cost |  |  | \$196,000 |
| 2017 | \$78,400 | \$78,400 | 117,600 |
| 2018 | 47,040 | 125,440 | 70,560 |
| 2019 | 28,224 | 153,664 | 42,336 |
| 2020 | 16,934 | 170,598 | 25,402 |
| 2021 | 19,402 | 190,000 | 6,000 |
| Units-of-Production Depreciation |  |  |  |
| Asset Cost |  |  | \$196,000 |
| 2017 | \$19,000 | \$19,000 | 177,000 |
| 2018 | 47,500 | 66,500 | 129,500 |
| 2019 | 47,500 | 114,000 | 82,000 |
| 2020 | 38,000 | 152,000 | 44,000 |
| 2021 | 38,000 | 190,000 | 6,000 |

Straight-line: $(\$ 196,000-\$ 6,0000) / 5$ year $=\$ 38,000$ per year.
Double-declining balance: Rate is $\frac{1}{5} \times 2=40 \%$. Final year expense: $\$ 25,402-\$ 6,000=\$ 19,402$.
Units-of-production: Rate is $(\$ 196,000-\$ 6,000) / 200,000$ miles $=\$ .95$ per mile.

SOLUTIONS

## LG 19-7, continued

b.

| For 2017 | Straight-Line | Double-Declining <br> Balance | Units-of- <br> Production |
| :--- | :---: | :---: | :---: |
| Service revenue | $\$ 585,000$ | $\$ 585,000$ | $\$ 585,000$ |
| Operating expenses except for depreciation | $(415,000)$ | $(415,000)$ | $(415,000)$ |
| Depreciation expense | $(38,000)$ | $(78,400)$ | $(19,000)$ |
| Operating income before tax | $\mathbf{1 3 2 , 0 0 0}$ | $\mathbf{9 1 , 6 0 0}$ | $\mathbf{1 5 1 , 0 0 0}$ |

In the first year, the double-declining-balance method results in more than twice as much depreciation expense as straight-line (double the straight-line rate and cost is not reduced by residual value), resulting in lower income. Units-of-production depreciation depends on the miles used, and in the first year, the truck was not driven a great number of miles, so the depreciation expense is relatively low. This resulted in higher income.
c.

| For 2017 | Straight-Line | Double-Declining <br> Balance | Units-of- <br> Production |
| :--- | :---: | :---: | :---: |
| Operating income before tax | $\$ 132,000$ | $\$ 91,600$ | $\$ 151,000$ |
| Income tax @ 40\% | $\mathbf{5 2 , 8 0 0}$ | $\mathbf{3 6 , 6 4 0}$ | $\mathbf{6 0 , 4 0 0}$ |

Double-declining results in greater cash flow because of a tax savings of $\$ 16,160$ greater than straight-line and $\$ 23,760$ greater than units-of-production. In early years, double-declining usually provides the greatest tax savings and best cash flow. However, this reverses in later years, when double-declining results in much less depreciation.
d. Over the entire 5 -year life of the truck, all the methods result in the same total depreciation, and the same amount of tax savings if the tax rate is constant. The different methods result in different timing of the expenses.

|  |  |  |  |  |

## Notes

March 1: Depreciation needs to be updated for the two months owned in January and February before the sale. $(\$ 90,000 / 10) \times 2 / 12=\$ 1,500$. Book value decreases to $\$ 6,500$ as accumulated depreciation increases to $(\$ 90,000-\$ 8,000)+\$ 1,500=\$ 83,500$. Gain on sale is $\$ 12,000-\$ 6,500=\$ 5,500$.
July 31: The equipment and its accumulated depreciation need to be removed. The loss is the amount of the asset book value. Current year depreciation is $(\$ 30,000 / 10) \times 7 / 12=\$ 1,750$. Book value at time of disposal is $(\$ 30,000-\$ 19,000)-\$ 1,750=\$ 9,250$.

## SOLUTIONS

LG 19-10, continued
Nov. 1: This equipment is impaired. Its loss of efficiency is an indicator, confirmed by cash flow of current sales value of $\$ 9,000$ plus future cash flows of $\$ 10,000=\$ 19,000$ which is less than current book value of $(\$ 60,000-\$ 36,400)=\$ 23,600$. Depreciation to November 1 is: $(\$ 60,000 / 10) \times 10 / 12=\$ 5,000$. The impairment is recorded by removing the prior accumulated depreciation and reducing the asset to its current estimated fair market value. The loss is the difference between book value and fair market value: $\$ 23,600-\$ 9,000=\$ 14,600$
b. To record the current year 2018 depreciation expense, we need to view the assets in four categories:

1) Remaining balance of equipment from December 31, 2017
2) Equipment acquired during 2018 for a partial year of depreciation expense
3) Patent acquired during the year for a partial year of amortization expense
4) Remaining balance of buildings from December 31, 2017

To follow the equipment changes are determine final balances, we can use T accounts:

|  |  | Equipment |  |
| :--- | :--- | :--- | :--- |
| Jan. 1 | Balance | 780,000 |  |
| Mar. 1 | Sale |  | 90,000 |
| July 31 | Retirement |  | 30,000 |
| Sept. 1 | Purchase | 65,400 |  |
| Nov. 1 | Impairment |  | 51,000 |
| Dec. 31 | Balance | 674,400 |  |

|  | Accumulated DepreciationEquipment |  |
| :---: | :---: | :---: |
| Jan. 1 Balance |  | 312,000 |
| Mar. 1 Update depreciation |  | 1,500 |
| Mar. 1 Sale | 83,500 |  |
| July 31 Update depreciation |  | 1,750 |
| July 31 Retirement | 20,750 |  |
| Nov. 1 Update depreciation |  | 5,000 |
| Nov. 1 Impairment | 36,400 |  |
| Dec. 31 Balance before adjust. |  | 179,600 |
| Dec. 31 Adjustments |  | 82,700 |
| Dec. 31 Final balance |  | 262,300 |

## Depreciation and Amortization Expense Calculations:

1) Remaining equipment balance from December 31, 2017 (full year depreciation): $(\$ 674,400-\$ 65,400) / 10=\$ 60,900$
2) Equipment acquired during 2018: $(\$ 65,400 / 10) \times 4 / 12=\$ 21,800$
3) Patent acquired during 2018 (amortization): $(\$ 75,000 / 9) \times 7 / 12=\$ 4,861$
4) Remaining buildings balance from December 31,2017 (no change): $\$ 2,100,000 / 30=\$ 70,000$

LG 19-12.
a. The new chairman of the board of directors is confused about the meaning of depreciation. For accounting and financial purposes, the word depreciation does NOT means loss of valuethis is the everyday, non-accounting meaning of the word. For accounting and financial purposes, depreciation is the process of allocating the cost of a long-term asset into expense over the asset's estimated usefullife. This is an application of the matching principle. Depreciation does NOT mean putting money aside to replace an asset. If this were happening, there would be a separate and identifiable cash account existing for this purpose, and it would have nothing to do with depreciation. Sometimes companies use the phrase reserve for depreciation or depreciation reserve. This is very misleading.
b. This situation illustrates the problem of how to determine the correct market value. The question gives no indication of the fair market value of either asset, so we really cannot record the exchange until we have better information. The GAAP rule is that, for transactions with commercial substance, the fair market value that is most reliable should control how the transaction is recorded. This can either be the fair market value of the new asset or the fair market value of the old asset. For example, in this question, if:

- We know the fair market value of the old asset is $\$ 5,000$, then we assume that the value of the new asset is equivalent to this, so there is a $\$ 2,000$ gain because the new asset exceeds book value of the old asset by $\$ 2,000$.
- We know that the fair market value of the new asset is $\$ 2,000$ and is more reliable, then this is less than the book value of the old asset, so there is a $\$ 1,000$ loss.
- We know fair market values are equal, there will be no gain or loss.

|  | Interest Payable |  |  |
|  | (To accrue note payable interest: $\$ 25,000 \times .05$ ) |  |  |

## Calculations:

April 5: The asset's life is being extended, so the procedure is to debit accumulated depreciation for the cost of the renovation. Prior annual depreciation expense is $(\$ 32,000-\$ 5,000 / 10=\$ 2,700$. Prior book value: $\$ 32,000-\$ 21,600=\$ 10,400$. New book value: $\$ 32,000-\$ 12,600=\$ 19,400$.
June 1: At $\$ .02$ per copy, the current depreciation is $\$ .02 \times 9,600=\$ 192$. Accumulated depreciation is therefore $\$ 11,000+\$ 192=\$ 11,192$. Book value is $\$ 12,500-\$ 11,192=\$ 1,308$.

| Sales price | $\$ 1,200$ |
| :--- | ---: |
| Book value | 1,308 |
| Loss on sale | $\underline{(\$ 108)}$ |

November 30: Selling $\$ 2,000$ of the furniture is $\$ 2,000 / \$ 10,000=20 \%$ of the cost. Current depreciation on the $20 \%$ portion at date of sale would be: $\$ 10,000 / 8=\$ 1,250$ per year $\times .2=\$ 250 . \$ 250 \times 11 / 12=$ $\$ 229$ (rounded). Book value at date of sale is: $(\$ 10,000 \times .2)-\$ 229$ accumulated depreciation $=\$ 1,771$.

| Sales price | $\$ 3,500$ |
| :--- | ---: |
| Book value | 1,771 |
| Gain on sale | $\underline{\$ 1,729}$ |

December 31 Impairment:

- Current book value: $\$ 26,000-\$ 7,500^{*}=\$ 18,500$
- Undiscounted future cash flows: $(\$ 2,300 \times 5)+\$ 2,000=\$ 13,500$
- Book value vs. cash flows: $\$ 18,500$ exceeds $\$ 13,500=$ Asset is impaired.
- Amount of impairment loss: \$18,500 - \$7,100 = \$11,400
* $(\$ 26,000-\$ 5,000) / 7=\$ 3,000 \times 2.5$ years $=\$ 7,500$ accumulated depreciation.

December 31 adjustments for depreciation:

- Office furniture: $(\$ 10,000-\$ 2,000) / 8=\$ 1,000$.
- Production equipment: $\$ 25,000 \times(1 / 5 \times 2)=\$ 10,000$
- Production equipment: $(\$ 19,400$ new depreciable basis $-\$ 5,000) /(2+7)=\$ 2,057$.
- Computer system: Use revised value after impairment loss (\$7,100 - \$2,000)/5 = \$1,020

## SOLUTIONS

LG A19-1 This is a transaction with commercial substance because a newer computer is replacing an older computer, which will have a shorter period of cash flow, and also probably be less efficient or less functional, affecting cash flow.

Fair market value of old asset

| A Co. | B Co. |
| :---: | :---: |
| \$11,000 | \$18,000 |
| 7,000 | $(7,000)$ |
| 18,000 | 11,000 |
| 13,000 |  |
|  | 9,000 |
| \$ 5,000 | \$ 2,000 |

## SOLUTIONS

LG A19-5 This is a transaction with commercial substance because a newer air conditioner is replacing an older one, which will have a shorter period of cash flow, and also probably be less efficient or less functional, affecting cash flow. (This is a somewhat unusual situation because one asset has such a low fair value and the other asset has such a high fair value. Also, in this case, the fair value of the old asset for B Company will have to be determined by the fair value of the asset received plus cash received. There is no fair value information for B.)

Fair market value of old asset

| A Co. |  | B Co. |
| :---: | :---: | :---: |
| $\$ 15,000$ |  | $\$ 125,000$ |
| $\underline{110,000}$ |  | $\underline{(110,000)}$ |
| 125,000 |  | 15,000 |
| 112,000 |  |  |
| $\underline{\$ 13,000}$ |  | $\underline{31,000}$ |
| 46,000 |  |  |

${ }^{*}$ Cash received exceeds equipment book value so this adds to gain. To verify B Company gain, subtract book value from fair value of old asset: $\$ 125,000-(\$ 185,000-\$ 106,000)=\$ 46,000$.

Journal entry for A:

| Air Conditioning Equipment (new) | 125,000 |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Accumulated Depreciation-A/C Equip. | 83,000 |  |  |  |  |
| Air Conditioning Equipment (old) |  | 85,000 |  |  |  |
| Cash |  | 110,000 |  |  |  |
| Gain on Exchange |  | 13,000 |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |

Journal entry for B:

|  |  |  |
| :--- | :---: | :---: |
| Cash | 110,000 |  |
| Air Conditioning Equipment (new) | 15,000 |  |
| Accumulated Depreciation-A/C Equip. | 106,000 |  |
| Air Conditioning Equipment (old) |  | 185,000 |
| Gain on Exchange |  | 46,000 |

## SOLUTIONS

LG A19-6 This is a transaction that lacks commercial substance. Both cars have essentially the same features and are of the same age, to be used in the same manner. The value of car A is used to determine the value of $B$, because car A value is the only one available. No cash is involved, so no part of gain is recognized because there is no commercial substance. All losses are recognized.

Fair market value of old asset
Cash paid (received)
Cost of new asset
Less book value given up:
Less book value given up:
Gain or (loss) recognized

(Gain Eliminated)
